

# CHICK-FIL-A

## Odor Control

### The Challenge

When Chick-fil-A opened a new restaurant in southern Alabama, the odors discharged from the restaurant exhaust duct generated complaints from nearby businesses. The new Chick-fil-A had a drive-thru located inside an existing parking complex and the only available grease duct exhaust point was pointing towards other business' outside air intakes.

### The Solution

GPS' KOG-50™ was installed and ducted into the grease exhaust to control the odors exiting the building.

CAPEX SAVINGS  
**>\$50,000**

ANNUAL OPEX SAVINGS  
**>\$4,000**

### The Results

When the KOG-50 was energized, the odors exiting the exhaust duct were immediately eliminated. Since the KOG-50 was installed, there have been no additional complaints from the nearby businesses.

The logo for GPS (Global Plasma Solutions) features the letters "GPS" in a bold, blue, sans-serif font. A stylized blue wave graphic is positioned below the letters, curving under the "P" and "S". A registered trademark symbol (®) is located to the upper right of the "S".
